

Comment on results of Size Quantitative Research

Senior Citizen Advisory Board of Nuremberg Germany

Representative: Mr .K.H. Ludwig

Senior Citizen Advisory Board of Nuremberg- Germany

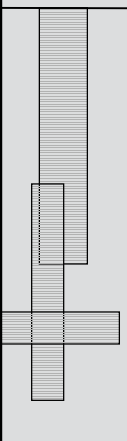

Comments on mobility of older adults today, compared with former times and with respect to results of Size

- P Present societies are societies of longevity
- P Health restrictions arise mostly later on and can be better compensated.
- P The technology for it is present today.

Discussion on results of the quantitative research

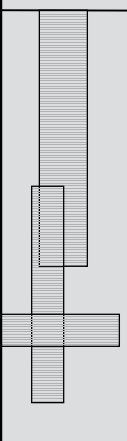

- P We were the opinion that the distinction between cities, suburban settlement and rural areas has a great impact on mobility and will get more important in future,
- P the urgency of some measures to improve mobility gets clearer,

The results of Size confirm our opinion that this development will become positive in future.

Issues of interest From the view of senior citizen advisory board

- P more control of speed and traffic by local authorities,
- P costs of aids to improve mobility should be reduced, costs of mobility should be payable for older adults,
- P better integration of differently means of transport, could solve a lot of mobility problems of older adults,
- P adjustment and improvements of the traffic routes to safety as well as to security.

Regarding the fears of older humans as serious

Thanks for your Attention
